# Feedback request – Planned code removals in Merative Social Program Management in a future release

**News**

**Abstract**

In a future release of Merative Social Program Management, product development is planning to remove some previously deprecated features and artifacts. Removing deprecated features and artifacts ensures that we maintain a lean product, which enables us to focus on delivering business value.

**Content**

We are soliciting customer feedback on the planned removals, after which we will make decisions on what will be included.

We request that customers use version 1.0.2 of the Social Program Management Artifact Dependencies Search Tool to assess whether any customer dependencies exist on the features and artifacts. The updated and improved tool includes a file that contains a list of the artifacts that product development is planning to remove from Merative Social Program Management.

Artifacts for the following six features have been identified for removal:

- Deprecated client artifacts for previous Social Program Management releases
- Remaining artifacts for the Legacy Employment Contribution Entities feature
- Generic Search Server (GSS) feature
- Oracle Warehouse Builder (OWB) and DB2 ETLs
- Cúram Provider Management Performance Monitoring
- Cúram Provider Management Taxonomy

We are also planning to remove the following additional artifacts:

- Spell Checker
- Smart Navigator Search Page target
- Evidence flow struct
- Duplicated application and IEG domains
- ScanMilestoneDeliveryStartDate and ScanMilestoneDeliveryEndDate batch jobs
- IndexProductDeliverySynchronization class
- Outdated APIs used to return application verifications
- Rest APIs for resetting passwords
- Rest APIs from the IEGEngineAPI
- The `curam.outcomeplanning.defaultTimelineView` application property

---

## Action for customers

1. Download version 1.0.2 of the Artifact Dependencies Search Tool by going to the [Merative Support Community](#). Under **Software Downloads**, click **Go to Downloads**, and follow the instructions to access and download the tool.
2. Run the tool on your codebase. The tool, which is quick and easy to run, generates a report that highlights any dependencies on the artifacts that are planned for removal. See the full instructions in the package readme file.
3. Send your results to [spm.feedback@merative.com](mailto:spm.feedback@merative.com) for analysis. Please include which customer and project the report was generated for in the email. Merative Social Program Management will respond to all reports returned.
